Decreasing fibrinogen levels are the **first sign of post-partum hemorrhage**, the leading cause of death during childbirth, worldwide.

**INTRODUCING NEW**

**qLabs® FIB**

Fibrinogen Monitoring System

A POINT-OF-CARE ANALYSER FOR PPH MANAGEMENT THAT MEASURES FIBRINOGEN LEVELS WITHIN 1 TO 10 MINUTES
The NEW easy-to-use qLabs® FIB measures fibrinogen levels within 1 to 10 minutes at the point-of-care.

The lower the level, the faster the time-to-result, helping clinicians to give the right product at the right moment to treat post-partum hemorrhage.

From a single drop of blood, the novel POC device delivers robust, lab comparable results, with integrated hematocrit adjustment.

**Features and specs**

*Quantification of functional fibrinogen*
Clot-based fibrinogen measurement correlated to Clauss fibrinogen method

**Sample Type**
Venous whole blood in standard coagulation citrated tube (blue cap, 3.2% (0.109 M) sodium citrate)

**Sample Volume**
15 µL

**Reportable Range**
1.0 – 4.0 g/L (Reference range: 2.0 – 4.0 g/L)

**Precision**
CV ≤7.0%

**Hematocrit Range**
20% to 60%

**Shelf Life at Room Temperature**
24 months

**qLabs® FIB test shows very strong correlation with Stago STA®-Liquid Fib test. The correlation coefficient is 0.985 with an intercept of 0.034 and slope of 1.006 (n=98)**

**Designated Cat. Nr. Packaging**
